GRADE 9 | EASY MODULE C PRACTICE

Should Schools Have Different Maths Groups?

READING COMPREHENSION | Read the text carefully.

Many schools put students into different maths groups. Some groups learn quickly, while other groups have more time to practise. Is this a good idea?

Supporters say that groups help teachers plan better lessons. Students who find maths difficult can get more help. Students who learn quickly can try harder questions. Everyone can learn at a comfortable speed.

However, not everyone agrees. Some students feel bad when they are put in a slower group. They may think they are not clever. Also, students in different groups do not always get the same opportunities.

At Green Hill School, students tried a new system. They studied together for three lessons a week. In one lesson, they worked in small groups and got help with the topics they found difficult.

After two months, most students said they liked the new system. They felt that they could learn from one another. Their teacher said, "The important thing is not the name of the group. It is helping every student make progress."

Name: _____ Class: _____ Date: _____

GRADE 9 | EASY MODULE C PRACTICE

Questions 1-7 | Reading comprehension

1. What is the text mainly about? Circle ONE answer.

a. School trips b. Different maths groups c. Sports lessons

2. Complete: Some maths groups have more time to _____.

_____

3. Give ONE reason why supporters like maths groups.

_____

4. Why may students feel bad in a slower group?

_____

5. What did students at Green Hill School do three times a week?

_____

6. What did most students think after two months?

_____

7. According to the teacher, what is the most important thing?

_____

8. Writing | About 70 words

Should students be allowed to use mobile phones in class?

Give your opinion and explain it with at least TWO reasons.

In my opinion... / First... / Also... / For example... / In conclusion...

_____

_____

_____

_____

_____

_____

_____
